The invention provides a gene for the treatment of muscular dystrophy having at least one rod repeat structure of hinge 1, hinge 4 and rod domain of dystrophin gene and having a base sequence of 4.5 kb. The gene and a gene-introducing medium consisting of an adeno-associated virus (AAV) vector or lentivirus vector containing the rod shortened dystrophin genes can be used for the genetic treatment of muscular dystrophy of low immune reaction. Sequences AAZ48572-584 represent

Genomic sequences AAT04954-55 of mouse Kv1.7 voltage-gated potassium channel (see AAT04953) show the splice donor and acceptor sites which form the boundaries of the single intervening sequence (see Fig 1A). These sequences are compared with that of mouse (mKv1.7 and hamster (haKv1.7) cDNAs. The potassium channel may be used in drug screening for identification of therapeutics which modulate the channel and, therefore, modulate insulin secretion. Selective antagonists increase insulin release and thereby reduce hyperglycemia associated with non-insulin-dependent diabetes
                                                                                                                                                                                                                                                                                                                                                                          New voltage-gated potassium channel gene - used to identify material(s) which can increase insulin release e.g. for treating non-insulin dependent diabetes mellitus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Fas ligand; transplant rejection; autoimmune disease; diabetes; inflammation; graft rejection; rheumatoid arthritis; allergy; cystic fibrosis; multiple sclerosis; polymerase chain reaction;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAZ53015 to AAZ54536, AAZ54577 to AAZ54615, and AAY74253 to AAY75941 represent novel Neisseria meningitis and N. gonorrheae polynucleotides and polypeptides. AAZ54578 to AAZ54576 and AAZ54616 to AAZ5473 represent PCR primers used in the exemplification of the present invention. The polypeptides, antibodies and compositions of the invention can be used as vaccines, as diagnostic reagents, and as immunogenic compositions. The polypeptides can be used in the manufacture of medicaments for treating or preventing infection due to Neisserial bacteria (e.g. meningitis and septicaemia), to detect the presence of Neisseria bacteria, or to raise antibodies. They may also be used to screen for agonists or antagonists, which may themselves have use as antibacterial agents. The polynucleotides of the invention

The present invention describes a gene amplification system comprising a transducing vector, a packaging vector and a suitable host. The lentiviral vectors are useful to transform suitable host. The certification of the vectors are useful to transform suitable host. The certification of a dividing human cells (e.g. neuronal cells and hemantopoietic stem on-dividing human cells (e.g. neuronal cells and hemantopoietic stem colls) e.g. in gene therapy. The vector system is also useful to produce polypeptides in cells (e.g. TE671 and HeLa cells) in vitro and in vov, and to produce transgenic animals e.g. animals expressing human proteins. Use of modified lentiviral packaging vectors reduces the risk of generating replication-competent virus through recombination with the transducing vector or a defective provirus endogenous to the vector system provides increased long-term gene expression compared with prior art lentivirus packaging vectors. The vector system provides increased long-term gene expression compared with prior art lentivirus packaging vectors. The vector system provides increased long-term gene expression compared with other viral vectors (e.g. could remain transduced for at least 120 days), so it may be possible for the vector to remain transduced for the necessary time course of a particular treatment. AAZ55538 to AAZ5578 represent nucleotide sequences used in the exemplification of
express specific genes at high levels, e.g. for gene therapy. The improved vectors are safer, yet permit increased efficiency of packaging the recombinant viral genome and increased long-term gene expression. These properties are required for gene therapy as a means of treating infectious and non-infectious diseases. Unlike other retroviruses, the lentiviruses are able to infect non-dividing cells. The present sequence represents an HIV VPx C-terminal and Tat N-terminal PCR primer which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New gene amplification system, useful to express a target gene in cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      gene amplification system; gene therapy; packaging;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes a packaging vector (PV) comprising a nucleotide sequence encoding Gag and Pol proteins of a reference lentivius that differes from the reference lentivius at least in that:

(a) its major splice donor site is either deleted or is sufficiently different from the reference lentivirus so that it is not a potential site for homologous recombination; and (b) it lacks a functional major packaging signal so that the introduced vector causes the host cell to produce packaging vector particles comprising functional Gag and Pol proteins. The vectors are useful for transforming (eukaryotic) cells to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New packaging vector comprising a nucleotide sequence encoding Gag and Pol proteins of a reference lentivirus useful for the delivery of non-lentiviral genes to target cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        PCR primers AAZ01426-206209 were used to amplify open reading frames (ORFs) of the genome of Chlamydia trachomatis (see AAZ01425). These ORFs encode polypeptides (see AAX36754-Y37949) which can be used as vaccines against Chlamydia trachomatis. Antisense and ribozyme sequences can also be used to control growth of the microorganism. Chlamydia trachomatis is responsible for a large number of diseases, e.g. eye

The invention relates to a multivalent vaccine for protecting cats against several pathogens, especially pathogens associated with respiratory and digestive diseases. The pathogens are especially selected from feline leukaemia virus (FeLV), feline panleukopaenia virus (FPV), feline calcivirus (FCV), feline immunodeficiency virus (FIV), or rabies virus. The vaccines are preferably composed of polynucleotide sequences encoding 3 antigens, all as part of vectors. Primers AAV49285-V49286 were used to PCR amplify the feline immunodeficiency virus (FIV) petaluma strain gene encoding the envelope glycoprotein. The sequence sub-cloned into the plasmid pVR1012 to

Turkat cell line cDNA library. The cDNA sequence of Arginase I was used as a probe sequence for a computer search of cDNA databases. Several expressed sequence for a computer search of cDNA databases. Several expressed sequence tags with 50-60% sequence. The above PCR primers were designed to the extreme 3' and 5' ends of the consensus sequence, and used to isolate arginase II. In addition to a hypothetical role in the production of proline and glutamate, it is postulated that arginase II. In addition to a hypothetical role in the production of proline and glutamate, it is postulated that arginase II, or its agonists, antagonists and fragments, are used to treat conditions associated with lack of arginase activity. Compounds that inhibit activation of the protein are used to treat conditions associated with excess arginase activity. Typical conditions that can be treated are diseases of the urea cycle, hypertension, hypotension (caused by sepsis or cytokines), episodic hyperammonaemia, defective synthesis of proline, glutamate, nitric oxide or ornithine.

Caused by sepsis or cytokines), episodic hyperammonaemia, defective synthesis of proline, glutamate, nitric oxide or ornithine.

Pyperarginaemia and related spasiticity, prostate or kidney damage, also nitric oxide associated immune and nervous system diseases. The arginase II cDNA is used to produce recombinant protein and for chromosome in the contract arginase II-encoding sequences and to diagnose the above

Arginase II, or its agonists, antagonists and fragments, are used to treat conditions associated with lack of arginase activity. Compounds that inhibit activation of the protein are used to treat conditions associated with excess arginase activity. Typical conditions that treated are diseases of the urea cycle, hypertension, hypotension (caused by sepsis or cytokines), episodic hyperammonaemia, defective
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         synthesis of proline, glutamate, nitric oxide or ornithine, hyperarginaemia and related spasticity, prostate disease (e.g. cancer, prostatitis and benign hypertrophy), prostate or kidney damage, also nitric oxide associated immune and nervous system diseases. The arginase II CDNA is used to produce recombinant protein and for chromosome
PCR primers AAV00578-90 were used to amplify human arginase II from a Jurkat cell line cDNA library. The cDNA sequence of Arginase I was used as a probe sequence for a computer search of CDNA databases. Several expressed sequence tags with 50-60% sequence homology were identified. These were combined to give a 1075 bp sequence. The above PCR primers were designed to the extreme 3' and 5' ends of the consensus sequence, and used to isolate arginase II. In addition to a hypothetical role in the production of proline and glutamate, it is postulated that arginase II may play an important role in nitric oxide biosynthesis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        identification, while its fragments are used (as primers and probes) to detect arginase II-encoding sequences and to diagnose the above
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Length 43;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Score 13.4; DB 18;

AAV00587 standard; cDNA; 43 BP.

RESULT 12 AAV00587/ AAV00587;

```
The invention relates to a polypeptide with Arginase II activity. The Arginase II polypeptides may be used in gene therapy for the treatment of type I arginase disorders resulting in hyperargininemia. The polypeptide sequences may also be used as immunogens to produce antibodies, these antibodies may then be used to treat numerous diseases e.g. urea disorders, hypertension, hypotension, prostate cancer, benign prostatic hyperplasia. Sequences AAXY7307-319 represent PCR primers used for cloning the Arginase II cDNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   uropathic; cytostatic; neuroprotective; gene therapy; hypertension; nitric oxide biosynthesis modulator; urea cycle disease; hypotension; episodic hyperammonaemia; hyperargininaemia; spasticity; prostatitis; growth retardation; progressive mental impairment; prostate disease; prostate cancer; benign prostatic hyperplasia; hypertrophy; prostate damage; kidney disease; kidney damage; PCR primer; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The sequence is that of a PCR primer (5R) which was synthesised based on a potential arginase II EST consensus sequence. It was used in the amplification and cloning of the human arginase II gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New human arginase II protein – useful for treating, e.g. diseases associated with defect in arginase II gene such as episodic

Novel human arginase II polypeptides useful for treating urea cycle diseases, hypertension, hypotension, episodic hyperammonemia, to control nitric oxide formation and kidney damage -

Example 1; Fig 3; 37pp; English

The present invention describes human arginase II. Arginase II has hypertensive, hypertensive, uropathic, cytostatic and neuroprotective activities, and can be used in gene therapy and as an intric oxide activities, and can be used in gene therapy and as an intric oxide activities modulator. Human arginase II proteins can be used to treat diseases associated with or caused by a defect in the arginase II gene expression, such as, for e.g. urea cycle diseases, hypertension, hypotension, episodic hyperammonaemia, defects in biosynthesis of proline, glutamate, nitric oxide and ornithine, as well as hyperargininaemia and its related spasticity, growth retardation, and progressive mental impairment, and prostate disease, particularly prostate cancer, prostatitis and benign prostatic hyperplasia or prostate to montrol nitric oxide formation in an original and its also used to control nitric oxide formation in an individual. Arginase II or its fragments, variants or derivatives can be used as diagnostic reagents for diagnosing arginase II are used in an individual having or suspected of having a defect in the nitric oxide pathway and the urea cycle. The genes encoding arginase II are used in also used to deplace systemic arginine levels in an individual. AAA08061

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pMD42 (q1|4732114|q1b|AFL29072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."
      Mouse whole genome scaffolding with paired end reads from 10kb plasmid inserts

/note="Vector: Bluescript II SK-; Site_1: EcoRI; Site_2:
NotI; Mature bradyzoites were obtained from infected mouse
brains by percoll density centrifugation. The original
library was constructed by Steve Parmiey, Palo Alto
Medical Foundation. cDNAs were synthesized by priming with
oligo d(T) and directionally cloned into the EcoRI/NotI
sites of lambda gill. Warning: the library contains a
small percentage of host cDNAs derived from mouse cells.
Inserts from this cDNA library were excised with Notl and
EcoRI, size selected in a range of 0.7 - 2.0 kb and
subcloned into Bluescript II SK- (Adrian Hehl, Ian Manger
and John Boothroyd, Stanford University)"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   δλ
                                                                                                   (http://www.jax.org/resources/documents/dhares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymuclectide kinase. Adaptor oligonuclectides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pwD42 (qil4732114 (pilAFL29072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coll XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

(http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    P

/note="Organ: pooled: Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker; Site_1: Not I; Site_2: Eco RI; Equal amounts of plasmid DNA from three normalized libraries (fetal lung NHL19W, testis NHT, and B-cell NCI_CGAP_CGAP. CASP. and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hypridization reaction. The driver was PCR-amplified CDNAs from pools of 5,000 clones made from the same 3 libraries. The pools consisted of I.M. A.G.E. clones 297480-302087, 682632-687239, 726408-728711, and 729096-731399. Subtraction by Bento Soares and M. Fatima Bonaldo. " 8 a 8 c 12 g 15 t
10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pwD42 (gil4732141 gblAR129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli %110-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Homo sapiens

electrophoresis. Vector DNA was prepared from a derivative of pWD42 (qi|4732114|gb|RF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 S. 2030 E., SLC, UT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Rodentia; Sciurognathi; Muridae; Murinae; Mus. /sex="Male"
//lab_host="E. Coli strain XL10-Gold, Tl-resistant, F-"
//note="Vector: PWD42nv; Purified genomic DNA from M.
musculus C57BL/6J (male) was obtained from the Jackson
Laboratory Mouse DNA Resources
(http://www.jax.org/resources/documents/dnares/). The DNA
was hydrodynamically sheared by repeated passage through a
0.005 inch orifice at constant velocity. The sheared DNA
was blunt end-repaired with T4 DNA polymerase and T4
polynucleotide kinase. Adaptor oligonucleotides were
ligated to the blunt ends in high molar excess. The
adaptored DNA was purified and size-selected for a 9.5 to
10.5 kb range using preparative agarose gel
electrophoresis. Vector DNA was prepared from a derivative
of pWD42 (gil4732114|gb|AF129072.1), a copy-number
inducible derivative of plasmid R1. The vector was ligated
with adaptors complementary to the insert adaptors and
purified. The sheared, adaptored mouse DNA was annealed to
adaptored vector DNA, and transformed into
chemically-competent E. coli XL10-Gold (Stratagene) cells
and selected for ampicillin resistance."

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

JOURNAL Submitted (10-DEC-2000) Trypanosoma brucei genome sequencing project, Sanger Centre, The Wellcome Trust Genome Campus, Hinxton, Cambridge CB10 ISA, E-mail: barrell@sanger.ac.uk and nhl@sanger.ac.uk COMMENT CONSTRUCTED at the Institute for Genomic Research (TTGR).	Rockville, MD. Genomic DNA isolated from a cloned population of Trypanosoma brucei (TREU927/4 GUTat 10.1) was mechanically sheared to give a tight size distribution (4 kb). The v + i method used for the library construction is described in detail in Smith, H. and Venter, J.C. (Making small insert libraries for whole genome shotgun sequencing projects. In Genome Sequencing: A Practical Approach, eds. M. Vaudin and B. Barrell, Oxford University Press, 1999).	Details of T. brucei sequencing at the Sanger Centre are available at http://www.sanger.ac.uk/Projects/T_brucei/.                                                              /lab_host="E. Coli strain XL10-Gold, T1-resistant, F-"
/note="Vector: PWD42nv; Purified genomic DNA from M.
musculus G57BL/6J (male) was obtained from the Jackson
Laboratory Mouse DNA Resource
(http://www.jax.org/resources/documents/dnares/). The DNA
was hydrodynamically sheared by repeated passage through a
0.005 inch orifice at constant velocity. The sheared DNA
was blunt end-repaired with T4 DNA polymerase and T4
polynuclectide kinase. Adaptor oligonuclectides were
ligated to the blunt ends in high molar excess. The
adaptored DNA was purified and size-selected for a 9.5 to
10.5 kb range using preparative agarose gal
electrophoresis. Vector DNA was prepared from a derivative
of pWD42 (gil4732114|gb|AR129072.1), a copy-number
inducible derivative of plasmid R1. The vector was ligated
with adaptors complementary to the insert adaptors and
purified. The sheared, adaptored mouse DNA was annealed to
adaptored vector DNA, and transformed into
chemically-competent E. coli XL10-Gold (Stratagene) cells
and selected for ampicial in resistance."

```

```
(http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymuclectide kinase. Adaptor oligonuclectides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pwD42 (qi|4732114|qib|ARD20072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Unpublished (2000)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       δλ
                                                        (http://www.jax.org/resources/documents/dhares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymuclectide kinase. Adaptor oligonuclectides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gelectrophoresis. Vector DNA was prepared from a derivative of pWD42 (gil4732114) plaRt29072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chaptors competent E. coli XL10.Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

```
(http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pwD42 (gilq19219072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 BUKATYOCE: Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalla; Eutherla; Primates; Catarrhini; Hominidae; Homo.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         οy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                g
                                                                                                       (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (qi|4732114 qiplat129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

double-stranded cDNA was ligated to a DraIII adaptor [TGTTGGCTARCTG6], digested and clonned into distinct DraIII sites of the pME185-FL3 vector [5' site CACTGTGTG, 3' site CACCATGTG). Xhol should be used to isolate the cDNA insert. Size selection was performed to exclude fragments clists. Library constructed by Dr. Sumio Sugano (University of Tokyo Institute of Medical Science). CUTCTGCTCTTAAAGCTGGG and 3' end primer CGACCTGCAGCACA."

                                                                                                                                                  δŏ
                                                                                                                                                                                           Q
ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel. electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gil4732114[gb]AF129072.1), a copy-number inducible derivative of plasmid Rl. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."
